

TRADE[®] *flow*

Tradeflow[®] is a web-based software suite designed by Expeditors for use by customers. Tradeflow[®] solutions provide tools to help importers and exporters gain more control of the global logistics supply chain through visibility and data management. Divided into integrated modules, or Centres, Tradeflow[®] facilitates activities such as global product classification, landed cost estimation, compliance management, electronic booking, document creation and distribution and shipment visibility.

Product Management Centre

The system is a repository to store cross-border product attributes and images and it acts as your data warehouse for crucial classification and preferential duty information. It is designed to facilitate collaboration between you and all of your global trade partners.

Online Tariff and Compliance Tools

Access the Harmonized System code for classification of any product for over 120 countries. Have visibility to trade restrictions and other barriers (quotas and anti-dumping duties). Demonstrate Customs compliance.

Landed Cost Estimator

Gauge the duty and tax consequences for different sourcing and trading scenarios. Store and report results against the product for future reference.

Trade Partner Centre

The contact information for supply chain partners, such as suppliers and customs brokers, is stored in a repository. Trade partners can be screened against the restricted parties lists maintained by various governments and supra-national organizations like the United Nations or the European Union.

Trade Partner Screening

Monitor restricted party screening, denied parties and embargoed entities and countries. Comply with restrictions published by the UN, EU, US and other country-specific listings.

Trade Reference Centre

This centre provides users with access to current regulatory data, tariff classifications, and other pertinent trade data.

Global Trade Content

Landed Cost, Trade Party Screening, Classification and Compliance toolkit.

Shipment Management Centre

Is a centralized tool to capture data for purposes of booking shipments or import/clearances, creating documents and distributing these documents and data. This system offers efficiencies to importers and exporters and their logistic providers concerned with consistent streamlined shipment processing. Collaboration is made simple by allowing access to your documents across departments, divisions, vendors and other trade partners.

License Determination

Identifies barriers to trade including import or export license or permit requirements, quotas, anti-dumping or countervailing duties, and embargoes. Useful information to facilitate the international trading of goods is also included.

Document Determination and Forms Library

A Document Determination tool is provided to learn which documents may be required in a shipment transaction as well as the party responsible for the completion of these documents. Access to a library of document forms is also accessible that can be generated, emailed or attached to a booking.

Visibility Centre

A tool that provides the vehicle for tracking, reporting, and analyzing your shipments whether serviced by Expeditors or any other Freight Forwarder, Customs Broker, or other transportation and logistics provider. Industry-standard formatting, rules and requirements are the foundation of the system with administration of which parties can submit EDI messages as well as which parties can view the data managed by the user. Once established, the Visibility Centre can act as a platform for the tracking and measurement for all of your global logistic providers.

Establish Milestones and Parameters

Along with the standard tracking and reporting capabilities the Visibility Centre will provide, users the ability to set event milestones to record and manage key performance indicators.

Notification Alerts

Create notification alerts through email to designated parties based on key shipments events or when discrepancies occur.
